Blaze Rules Engine Wiki

A business rules engine is a software system that executes one or more business rules in a runtime production environment. The rules might come from legal regulation, company policy, or other sources. A business rule system enables these company policies and other operational decisions to be defined, tested, executed and maintained separately from application code. Rule engines typically support rules, facts, priority, mutual exclusion, preconditions, and other functions. Rule engine software is

Business rules engine - Wikipedia

Many commercial rule engines provide the Rete algorithm, a proprietary algorithm that embodies many of the principles of Rete. However, there are other execution algorithms such as the sequential algorithm (LOG and Blaze Advisor terminology), algorithms for evaluating decision tables/trees, and algorithms tuned for hierarchical XML. The Rete algorithm is a stateful pattern matching algorithm designed to minimize the evaluation of repetitive tests across many objects/attributes and many rules.

Business rules approach - Wikipedia

problem is that it doesn't talk about real standard rules engines, only about home made, which are a very bad idea, I'm talking about standard rules engines (Blaze Advisor, ILog, Drools) that implement RETE algorithm and provide a whole ecosystem to manage rules - BlackTigerX Jun 18 '09 at 19:59

When should you NOT use a Rules Engine? - Stack Overflow
