Reproductive cloning produces copies of whole animals. Therapeutic cloning produces embryonic stem cells for experiments aimed at creating tissues to replace injured or diseased tissues. Gene cloning, also known as DNA cloning, is a very different process from reproductive and therapeutic cloning.

Cloning Fact Sheet - Genome.gov

Cloning is reliant on two factors – having a method to get the data off the original transponder and having a transponder that will accept the new data. When both of these are true, then the key can be cloned. Some of the transponders that can't be cloned at the moment are listed here.
