Exploratory Data Analysis Statistics

In statistics, exploratory data analysis is an approach to analyzing data sets to summarize their main characteristics, often with visual methods. A statistical model can be used or not, but primarily EDA is for seeing what the data can tell us beyond the formal modeling or hypothesis testing task. Exploratory data analysis was promoted by John Tukey to encourage statisticians to explore the ...

This lack of trust can arise from various reasons like how was the data collected, what is the source of the data, is the data biased, has data been intentionally tampered with and so on. Performing the first two steps, i.e., initial data analysis and exploratory data analysis, it is easy to identify issues with the data set and not spend any time making false and erroneous models and predictions.
