Due to the nature of the electronics, a 10-watt tube amp will likely keep up with a blues or rock drummer just fine. However, a solid state amp that's 10 watts will go completely unheard. Tube amps are simply louder than their solid state counterparts, so when buying an amp don't just focus on the wattage but also the construction of it.

Guitar Amp Wattage: How Loud Is Enough? | WIRED GUITARIST

The basic rule is, your amp head's power output, usually indicated by watts, shouldn't exceed the wattage rating of your speakers. If my amp is rated at 200 watts, and I was powering a 100-watt speaker, then the speakers would probably blow after turning the volume up past 5 or 6 because amps use more of their power at higher volume.
