**Review]**

JavaScript is built on some very good ideas and a few very bad ones. The very good ideas include functions, loose typing, dynamic objects, and an expressive object literal notation. The bad ideas include a programming model based on global variables. JavaScript's functions are first class objects with (mostly) lexical scoping. JavaScript

It is the first lambda language to get to go mainstream. Deep down, JavaScript has more in common with Lisp and Scheme than with Java. It is Lisp in C's clothing. This makes JavaScript a remarkably powerful language.

JavaScript: The Good

Parts presents that

most programming

languages contain

good parts and bad

parts. Imperfections

are difficult to remove

from a language, so

they are destined to

stay in the language.

The programmer is

better off by leveraging

on the good parts and

avoiding features that

are more trouble than

they are worth.
